

# Homes, Teleports & Warps

Getting around: homes, teleport requests, spawn and warps.

- [Overview](#)
- [Homes](#)
- [Teleporting to Players](#)
- [Spawn & Warps](#)

# Overview

Nobody wants to walk everywhere. HellHold uses **EssentialsX** to get you around the world quickly — set personal homes, teleport to friends, and hop to public warps.

This book covers:

- **Homes** — save your own spots and teleport back to them.
- **Teleporting to Players** — ask to teleport to a friend (or pull them to you).
- **Spawn & Warps** — return to spawn or travel to the server's public locations.

“ Heads-up: `keepInventory` is off, so if you die on the way somewhere your items go into a **grave** at the spot — see the Graves book.

# Homes

A **home** is a saved location you can teleport back to any time. Set one at your base, your farm, your favourite build — wherever you keep coming back to.

## Commands

- `/sethome <name>` — save your current spot as a named home
- `/home <name>` — teleport to one of your homes
- `/homes` — list all of your homes
- `/delhome <name>` — delete a home you no longer need

If you only have one home you can just type `/home` to go straight to it.

## How many homes can I have?

The number of homes you can set depends on your rank:

Rank	Homes
Member	3
VIP	5
Staff	10

Reached your limit? Delete one with `/delhome <name>` to free up a slot, or set a new home over an old one.

“ Tip: name your homes something you will remember — `base`, `farm`, `nether` — so you are not guessing later.

# Teleporting to Players

Want to visit a friend? You do not need coordinates — just send a teleport request. The other player has to accept, so nobody can teleport to you uninvited.

## Commands

- `/tpa <player>` — ask to teleport **to** that player
- `/tpahere <player>` — ask that player to teleport **to you**
- `/tpaccept` — accept a request sent to you
- `/tpdeny` — decline a request sent to you

When you send a request, the other player sees a message and can `/tpaccept` or `/tpdeny`. Requests time out after a short while if there is no answer.

“ Etiquette: `/tpahere` pulls someone away from whatever they were doing, so use it sparingly — `/tpa` to go to them is usually the polite choice.

# Spawn & Warps

Beyond your personal homes, there are server-wide locations everyone can travel to.

## Spawn

- `/spawn` — return to the server spawn at any time.

Spawn is the safe hub everyone starts from — a good fallback if you are lost or stuck.

## Warps

Warps are public teleport points set up by staff (markets, event areas, hubs and so on).

- `/warps` — list every public warp
- `/warp <name>` — travel to a warp

The list of warps grows as the server does, so check `/warps` now and then to see what is new.
