

Teleporting to Players

Want to visit a friend? You do not need coordinates — just send a teleport request. The other player has to accept, so nobody can teleport to you uninvited.

Commands

- `/tpa <player>` — ask to teleport **to** that player
- `/tpahere <player>` — ask that player to teleport **to you**
- `/tpaccept` — accept a request sent to you
- `/tpdeny` — decline a request sent to you

When you send a request, the other player sees a message and can `/tpaccept` or `/tpdeny`. Requests time out after a short while if there is no answer.

“ Etiquette: `/tpahere` pulls someone away from whatever they were doing, so use it sparingly — `/tpa` to go to them is usually the polite choice.
