

Overview

No more leaving floating logs behind. With **TreeTimber**, breaking the **bottom log** of a tree with **any axe** fells the **whole tree at once** — every log drops in one go.

It is enabled for **everyone** by default, and you can toggle it for yourself any time. See **Commands & Tips** for the details.

“ Pair it with replanting a sapling on the fresh stump and you have a one-swing, sustainable timber routine.
